Pages without text or paragraphs	2	+ 2
Pages without proper keyword optimization	0	0
Content that appears on several pages	0	0
Duplicate Content	0	0
Competing pages for the same keywords	0	0
Complete page duplicates	0	0

Pages with only a few paragraphs

Pages with little text or few paragraphs

Optimization Tips

The pages in this list contain less than three paragraphs of text.

Why you should break up your content into clear paragraphs:

To make text easier to read and understand, it is very helpful to break it up into paragraphs. This makes it easier for visitors to understand your content. It also increases the likelihood that they will spend more time on your pages.

What does Seobility define as a "text block"?

A "text block" is a coherent text section that contains at least 100 characters and is enclosed by HTML structural elements such as <p> or <div>. Headings or lists are not counted as text blocks.

How to solve these problems:

In addition to the number of paragraphs that were found, the "Number of words" column will show you how long the content of the page is in total. If the word count is high, you should structure the text in a better way. Use headings, teasers, paragraphs and subheadings to break up the text.

On the other hand, if there is little text content on the page, there may be room to expand the content.

Note: For pages with image galleries, result lists, and similar content that does not require long/structured text, you can ignore the warnings.

Pages with little text

Pages that contain only very little text

Optimization Tips

The pages in this list contain less than 500 words.

Why pages with little text can be problematic:

A text that is too short is problematic if the subject or the keyword of the page requires detailed and extensive information. If your competitors are offering better and more comprehensive content on the same topic, you're going to struggle to rank with short content.

However, it is not necessarily a problem to have pages with little text. If the pages are e.g. image galleries, landing pages, etc., it is perfectly fine to use very little text.

In addition, there are times when search engine users are in need of a quick and concise answer to a particular search query, and a long and lengthy text page is not the answer. In this case, long and detailed text may deter visitors.

How you should treat these pages:

Before you make any changes to the content of a page, you should first check whether the topic or target keyword of the page requires extensive content or not. You can do this by analyzing the current top 10 search results. With the [free TF*IDF tool provided by Seobility](#), you can easily check the number of words on these pages.

If you find that the content of your page is in fact too short, you can try to expand it. Think about what kind of information your target audience needs in order to fulfil their [search intent](#). However, you'll want to avoid writing long texts that are just designed to boost SEO. Most importantly, your content should add value to your visitors.

Pages using keywords in page title but not in its body text

Pages with keywords in the title tag, which don't appear in the page's body text

Optimization Tips

This list includes pages where keywords from the page title do not appear in the actual content of the page.

Why titles and content should be consistent:

The [page title](#) is one of the most important on-page SEO elements and should be a concise summary of the content of the page. Important [keywords](#) for the page should be included in the title, with the most important keyword at the very beginning. To ensure consistency between title and content, these keywords should also be included in the content of the page.

What the information in this list means:

The URLs affected by this problem are shown in the left column. The right column displays each URL's page title. The words in the title that do not appear in the content of the page are highlighted in bold.

How to fix these problems:

For each page listed, check that the page title matches the actual content of the page, and vice versa.

If the title contains the most important keywords, then you should also include these keywords in the text of the page. If, on the other hand, the text is properly optimized and the title is not, then you should optimize the title and include important keywords for the page there.

One important note:

This analysis does not consider synonyms or declination of keywords. This means that not all of the pages that are listed here need to be problematic. For example, if you have made grammatical adjustments to a keyword in the text of the page to ensure a natural reading flow, then of course there is no need to make any changes. Search engines such as Google have become very good at recognizing such variations of keywords.

Pages using keywords in H1 heading but not in its body text

Pages with keywords in the H1 tag, which don't appear in the page's body text

Optimization Tips

This list includes pages where keywords from the H1 heading do not appear in the text content of the page.

Why H1 headings and content should be consistent:

The [H1 heading](#) is an important on-page SEO element and should be a concise summary of the content of the page. Important [keywords](#) for the page should be included in this heading. To ensure consistency between the H1 heading and the content, these keywords should also be included in the content of the page.

What the information in this list means:

The URLs affected by this problem are shown in the left column. The right column displays each URL's H1 heading. The words in the heading that do not appear in the text content of the page are highlighted in bold.

How to fix these problems:

For each page listed, check that the H1 heading matches the text content of the page, and vice versa.

If the H1 contains the most important keywords, then you should also include these keywords in the text of the page. If, on the other hand, the text is properly optimized and the H1 is not, then you should optimize the H1 and include important keywords for the page there.

Ensure that the H1 heading differs from the [page title](#). Both elements should be unique.

One important note:

This analysis does not consider synonyms or declination of keywords. This means that not all of the pages that are listed here need to be problematic. For example, if you have made grammatical adjustments to a keyword in the text of the page to ensure a natural reading flow, then of course there is no need to make any changes. Search engines such as Google have become very good at recognizing such variations of keywords.

Pages with very much text

Pages that contain a lot of text and might be divided into several pages

No errors or problems were found.

Pages with duplicate paragraphs

Paragraphs that are repeated on a page

No errors or problems were found.

Pages with typos

Page content contains typos

No errors or problems were found.

Pages with filler text and images

Pages with filler texts or images

No errors or problems were found.

Pages without text or paragraphs

Pages on which no text or paragraphs were found

Optimization Tips

The Seobility bot did not find any text content on the following pages.

What does Seobility define as "text content"?

A "text block" is a coherent text section that contains at least 100 characters and is enclosed by HTML structural elements such as `<p>` or `<div>`. Headings or lists are not counted as text blocks.

Why you should avoid pages without text:

High-quality content is essential to get ranked on Google. On the other hand, if there is no text content on a page, search engine bots will have very little information to analyze the page's content and [index](#) the page.

How to fix these problems:

If the pages are [sitemaps](#) or pages you are not trying to rank, you should tell robots [not to index](#) these pages. It may also make sense to exclude them from crawling in your [robots.txt](#) if they do not contain important internal links.

However, if the pages contain content that the Seobility bot simply does not recognize, you should make sure that it is accessible to search engine bots. For example, most search engines cannot evaluate text in images or Flash elements.

You can find more information about quality content in our wiki article ["Content is King"](#).
